Agent

An **Agent**, or Intelligent Agent,

- ▶ exists in an **Environment**,

Agent

An **Agent**, or Intelligent Agent,

- ▶ exists in an **Environment**,
- ▶ perceives through **Sensors**,

Agent

An **Agent**, or Intelligent Agent,

- ▶ exists in an **Environment**,
- ▶ perceives through **Sensors**,
- ▶ effects through **Actuators**.

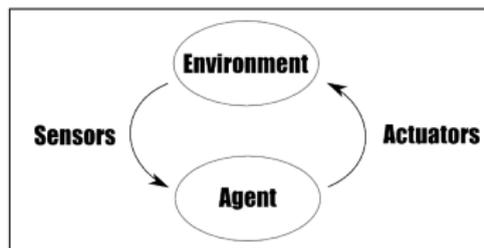

Figure: An agent.

Reflex Agents

Simple Reflex agents

- ▶ if-then rules,

Reflex Agents

Simple Reflex agents

- ▶ if-then rules,
- ▶ perform actions when a rule matches.

Reflex Agents

Simple Reflex agents

- ▶ if-then rules,
- ▶ perform actions when a rule matches.

Model-Based agents

- ▶ track the state of the environment.

Reflex Agents

Simple Reflex agents

- ▶ if-then rules,
- ▶ perform actions when a rule matches.

Model-Based agents

- ▶ track the state of the environment.

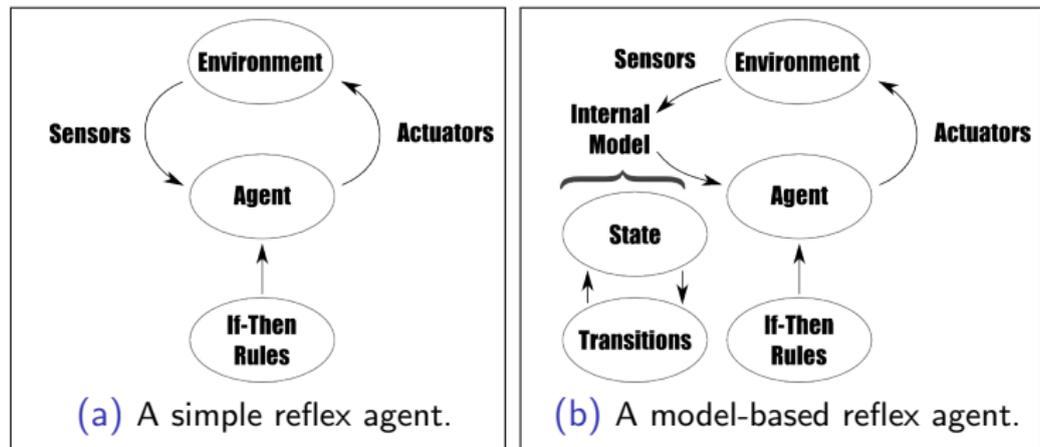

Figure: Depiction of simple reflex agent and model-based reflex agent.

Planning Agents

Planning agents

- ▶ model-based agents,

Planning Agents

Planning agents

- ▶ model-based agents,
- ▶ execute sequences of actions (a plan).

Planning Agents

Planning agents

- ▶ model-based agents,
- ▶ execute sequences of actions (a plan).

Goal-Based planning agents

- ▶ have goals,

Planning Agents

Planning agents

- ▶ model-based agents,
- ▶ execute sequences of actions (a plan).

Goal-Based planning agents

- ▶ have goals,
- ▶ use a knowledge base to construct a plan.

Planning Agents

Planning agents

- ▶ model-based agents,
- ▶ execute sequences of actions (a plan).

Goal-Based planning agents

- ▶ have goals,
- ▶ use a knowledge base to construct a plan.

Utility-Based planning agents

- ▶ assign utility (preference) to actions and states,

Planning Agents

Planning agents

- ▶ model-based agents,
- ▶ execute sequences of actions (a plan).

Goal-Based planning agents

- ▶ have goals,
- ▶ use a knowledge base to construct a plan.

Utility-Based planning agents

- ▶ assign utility (preference) to actions and states,
- ▶ maximize expected utility,

Planning Agents

Planning agents

Multi-Agent Systems

Planning agents

- ▶ good in **static** environments,
- ▶ poor in **dynamic** environments.

Multi-Agent Systems

Planning agents

- ▶ good in **static** environments,
- ▶ poor in **dynamic** environments.
 - ▶ e.g. An environment with other agents (people, pets, etc.).

Multi-Agent Systems

Planning agents

- ▶ good in **static** environments,
- ▶ poor in **dynamic** environments.
 - ▶ e.g. An environment with other agents (people, pets, etc.).

In a **Multi-Agent System**, multiple agents interact within an environment.

Multi-Agent Systems

Planning agents

- ▶ good in **static** environments,
- ▶ poor in **dynamic** environments.
 - ▶ e.g. An environment with other agents (people, pets, etc.).

In a **Multi-Agent System**, multiple agents interact within an environment.

Coping

- ▶ Use reasoning.

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,
- ▶ use reasoning to choose actions.

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,
- ▶ use reasoning to choose actions.

Types of reasoning:

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,
- ▶ use reasoning to choose actions.

Types of reasoning:

- ▶ **Speculative** reasoning: contemplative and certain thinking; the use of reason to decide what to **believe**.

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,
- ▶ use reasoning to choose actions.

Types of reasoning:

- ▶ **Speculative** reasoning: contemplative and certain thinking; the use of reason to decide what to **believe**.
- ▶ **Practical** reasoning: immediate and situational thinking; the use of reason to decide how to **act**.

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,
- ▶ use reasoning to choose actions.

Types of reasoning:

- ▶ **Speculative** reasoning: contemplative and certain thinking; the use of reason to decide what to **believe**.
- ▶ **Practical** reasoning: immediate and situational thinking; the use of reason to decide how to **act**.
- ▶ **Reactive** reasoning: the absence of reasoning.

Deliberative Agents

Deliberative, or intentional, agents

- ▶ planning agents,
- ▶ use reasoning to choose actions.

Types of reasoning:

- ▶ **Speculative** reasoning: contemplative and certain thinking; the use of reason to decide what to **believe**.
- ▶ **Practical** reasoning: immediate and situational thinking; the use of reason to decide how to **act**.
- ▶ **Reactive** reasoning: the absence of reasoning.
- ▶ **Hybrid** reasoning: a combination of the above.

The BDI Model

The **BDI** (Belief, Desire, Intention) model² employs practical reasoning.

²Michael Bratman. *Intention, Plans, and Practical Reason*. 1987. 

The BDI Model

The **BDI** (Belief, Desire, Intention) model² employs practical reasoning.

- ▶ **Beliefs**: (fallible) facts that represent the state of the environment.

²Michael Bratman. *Intention, Plans, and Practical Reason*. 1987.

The BDI Model

The **BDI** (Belief, Desire, Intention) model² employs practical reasoning.

- ▶ **Beliefs**: (fallible) facts that represent the state of the environment.
- ▶ **Desires**: aims the model is to accomplish, sometime in the future.

²Michael Bratman. *Intention, Plans, and Practical Reason*. 1987. 

The BDI Model

The **BDI** (Belief, Desire, Intention) model² employs practical reasoning.

- ▶ **Beliefs**: (fallible) facts that represent the state of the environment.
- ▶ **Desires**: aims the model is to accomplish, sometime in the future.
- ▶ **Intentions**: *committed* aims the model is to accomplish, in the *near* future.

²Michael Bratman. *Intention, Plans, and Practical Reason*. 1987. 

BDI Agents

BDI Agents

- ▶ deliberative agents,

BDI Agents

BDI Agents

- ▶ deliberative agents,
- ▶ state as beliefs,

BDI Agents

BDI Agents

- ▶ deliberative agents,
- ▶ state as beliefs,
- ▶ aims as desires,

BDI Agents

BDI Agents

- ▶ deliberative agents,
- ▶ state as beliefs,

Long-Term Memory

Long-term Memories are typically⁶ divided⁷ into two categories: procedural and declarative memories.

⁶J R Anderson. *Language, Memory and Thought*. 1976.

⁷Brenda Milner. "Les Troubles de la Mémoire Accompagnant des Lésions Hippocampiques Bilatérales". In: *Physiologie de l'Hippocampe* (1962).

Long-Term Memory

Long-term Memories are typically⁶ divided⁷ into two categories: procedural and declarative memories.

Procedural Memory: things one knows how to do; cognitive or motor skills.

⁶J R Anderson. *Language, Memory and Thought*. 1976.

⁷Brenda Milner. "Les Troubles de la Mémoire Accompagnant des Lésions Hippocampiques Bilatérales". In: *Physiologie de l'Hippocampe* (1962).

Long-Term Memory

Long-term Memories are typically⁶ divided⁷ into two categories: procedural and declarative memories.

Procedural Memory: things one knows how to do; cognitive or motor skills. Examples:

- ▶ Using a pencil.
- ▶ Riding a bicycle.

⁶J R Anderson. *Language, Memory and Thought*. 1976.

⁷Brenda Milner. "Les Troubles de la Mémoire Accompagnant des Lésions Hippocampiques Bilatérales". In: *Physiologie de l'Hippocampe* (1962).

Long-Term Memory

Long-term Memories are typically⁶ divided⁷ into two categories: procedural and declarative memories.

Procedural Memory: things one knows how to do; cognitive or motor skills. Examples:

- ▶ Using a pencil.
- ▶ Riding a bicycle.

Procedural memory is much like the if-then knowledge base of a reflex agent.

⁶J R Anderson. *Language, Memory and Thought*. 1976.

⁷Brenda Milner. "Les Troubles de la Mémoire Accompagnant des Lésions Hippocampiques Bilatérales". In: *Physiologie de l'Hippocampe* (1962).

Declarative Memory

Declarative Memory: things one knows; facts or knowledge.

Declarative Memory

Declarative Memory: things one knows; facts or knowledge.

Types of declarative memory:

- ▶ **Semantic Memory:** factual information.

Declarative Memory

Declarative Memory: things one knows; facts or knowledge.

Types of declarative memory:

- ▶ **Semantic Memory:** factual information. Example:
 - ▶ Recalling the definition of a word.

Declarative Memory

Declarative Memory: things one knows; facts or knowledge.

Types of declarative memory:

- ▶ **Semantic Memory:** factual information. Example:
 - ▶ Recalling the definition of a word.
- ▶ **Episodic Memory:** specific events in time.

Declarative Memory

Declarative Memory: things one knows; facts or knowledge.

Types of declarative memory:

- ▶ **Semantic Memory:** factual information. Example:
 - ▶ Recalling the definition of a word.
- ▶ **Episodic Memory:** specific events in time. Example:
 - ▶ Remembering that traffic is busy around 16:30.

Declarative Memory

Declarative Memory: things one knows; facts or knowledge.

Types of declarative memory:

- ▶ **Semantic Memory:** factual information. Example:
 - ▶ Recalling the definition of a word.
- ▶ **Episodic Memory:** specific events in time. Example:
 - ▶ Remembering that traffic is busy around 16:30.

Declarative memory is much like the knowledge base of a model-based agent.

HOMER

HOMER⁸ is a BDI agent with episodic memory.

⁸S Vere and T Bickmore. "A Basic Agent". In: *Computational Intelligence* (1990).

HOMER

HOMER⁸ is a BDI agent with episodic memory.
The agent is a simulated robotic submarine in a virtual two-dimensional “Seaworld” .

⁸S Vere and T Bickmore. “A Basic Agent” . In: *Computational Intelligence* (1990).

HOMER

HOMER⁸ is a BDI agent with episodic memory.
The agent is a simulated robotic submarine in a virtual two-dimensional “Seaworld” .

HOMER is able to:

- ▶ Plan tasks around current/conflicting tasks.

⁸S Vere and T Bickmore. “A Basic Agent” . In: *Computational Intelligence* (1990).

The agent is a simulated robotic submarine in a virtual two-dimensional “Seaworld”.

HOMER is able to:

- ▶ Plan tasks around current/conflicting tasks.
- ▶ Examine its own episodic memory to answer user prompts.

Example Dialogue

User: Drop the package at the barge next Saturday at 9pm.

HOMER: Okay.

[HOMER Generates Plan]

User: Are you going to the barge next Saturday?

HOMER: Yes.

User: What time?

HOMER: 8:56pm.

what advantages are afforded?

Such an agent could

- ▶ make better decisions,
- ▶ detect problems in plans,
- ▶ monitor long-term goals.

Forgetting

We note the following from observation:

- ▶ Humans routinely forget. Is the information
 - ▶ lost?
 - ▶ unretrievable?

⁹J T Wixted and E B Ebbesen. "Genuine Power Curves in Forgetting: A Quantitative Analysis of Individual Subject Forgetting Functions". In: *Memory & Cognition* (1997).

¹⁰J W Alba and L Hasher. "Is Memory Schematic?" In: *Psychological Bulletin* 93 (1983).

Forgetting

We note the following from observation:

- ▶ Humans routinely forget. Is the information
 - ▶ lost?
 - ▶ unretrievable?
- ▶ Memory performance declines over time⁹
 - ▶ decay of unused information,
 - ▶ interference of new and old information.

⁹J T Wixted and E B Ebbesen. "Genuine Power Curves in Forgetting: A Quantitative Analysis of Individual Subject Forgetting Functions". In: *Memory & Cognition* (1997).

Memory Size

Performance

- ▶ Inverse-power function.

Memory Size

Performance

- ▶ Inverse-power function.
- ▶ Poor for small memory size.

Memory Size

Performance

- ▶ Inverse-power function.
- ▶ Poor for small memory size.
- ▶ Good for large memory size.

Memory Size

Performance

- ▶ Inverse-power function.
- ▶ Poor for small memory size.
- ▶ Good for large memory size.
- ▶ Little gain for additional memory.

System 1: Autobiographical

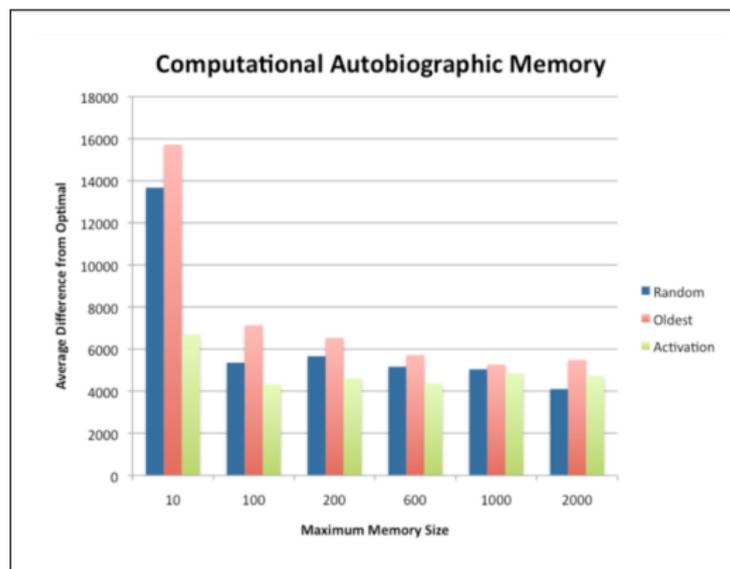

Figure: Results for the autobiographical system.

- ▶ Activation outperforms at low memory size.

System 1: Autobiographical

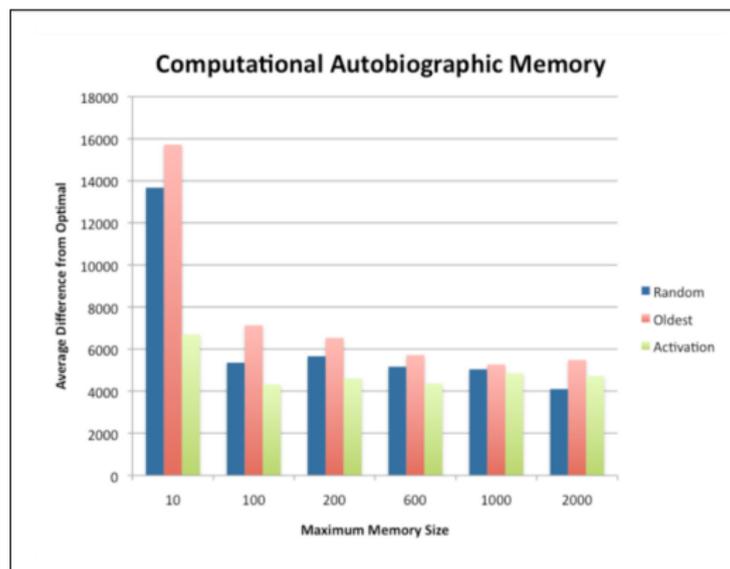

Figure: Results for the autobiographical system.

- ▶ Activation outperforms at low memory size.
- ▶ At higher memory sizes, all are comparable.

System 2: Generic

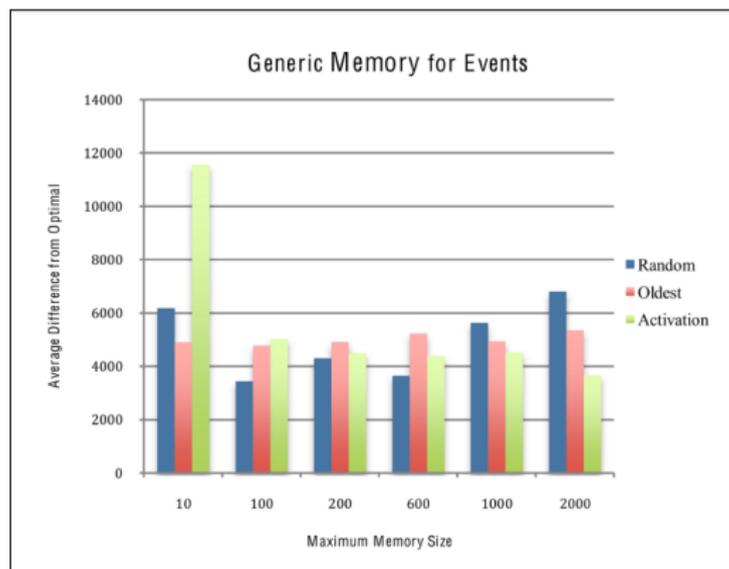

Figure: Results for the generic system.

- ▶ Activation algorithm was poor at low memory size.

System 2: Generic

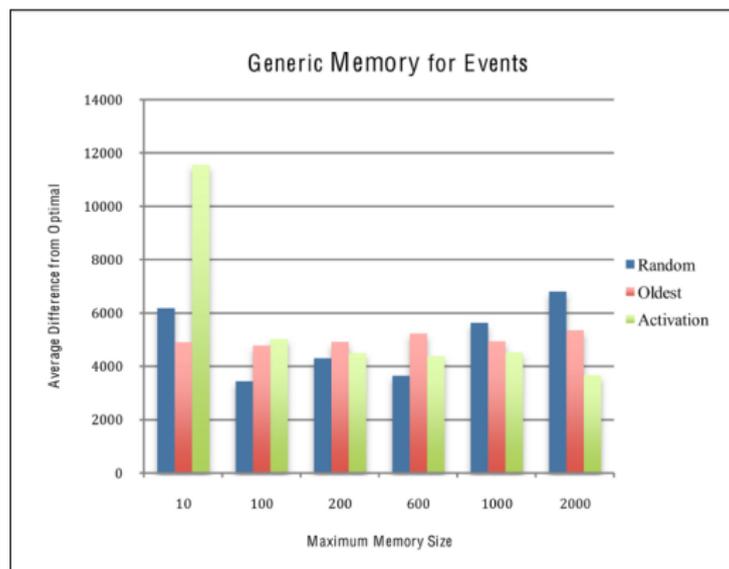

Figure: Results for the generic system.

- ▶ Activation algorithm was poor at low memory size.
- ▶ At higher memory sizes, all are comparable.

System 3: Soar

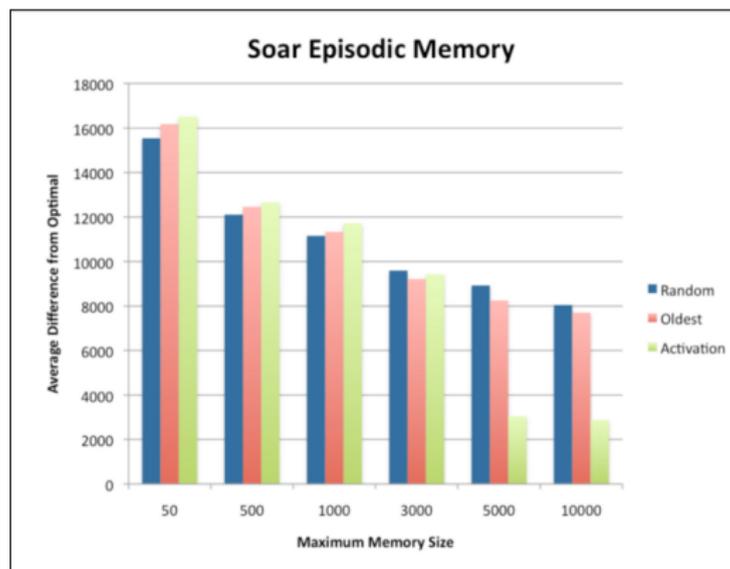

Figure: Results for the Soar system.

- ▶ All algorithms improve as memory increases.

System 3: Soar

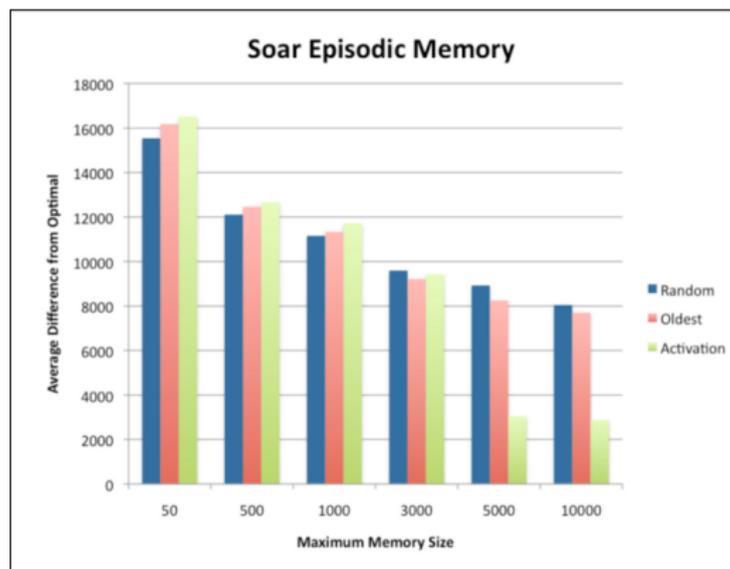

Figure: Results for the Soar system.

- ▶ All algorithms improve as memory increases.
- ▶ At higher memory size, activation *significantly* outperforms.

Summary

- ▶ Performance increases exponentially after a certain threshold in memory size.

Summary

- ▶ Performance increases exponentially after a certain threshold in memory size.
- ▶ This memory size threshold is different for each architecture.

Summary

- ▶ Performance increases exponentially after a certain threshold in memory size.
- ▶ This memory size threshold is different for each architecture.
 - ▶ Implies each domain needs a minimum number of stored episodes to be useful.

Summary

- ▶ Performance increases exponentially after a certain threshold in memory size.
- ▶ This memory size threshold is different for each architecture.
 - ▶ Implies each domain needs a minimum number of stored episodes to be useful.
- ▶ This memory size threshold is partially determined by the choice of algorithm.
